

ALBURY ORGANIC VINEYARD

FINE WINES FROM THE SURREY HILLS

Calling for Nature

Alessandra Valsecchi

Step by step

- University of Milan: specialized in fruit culture and viticulture. The essence of applied science and pure chemistry: 25 years ago the word 'organic' was not even known by most!
- UK, RHS Wisley Garden: understanding and applying the principal of organic growing.
- New Zealand: a paradise for growers where man works with nature.
- Albury Vineyard: Harmony!

Systematic approach

Wisley Vineyard and Orchard

Understanding organic growing principals

- Choose disease resistant cultivars
- Integrate pests management (IPM). According to the Directive On Sustainable Use of Pesticide (2009) all E.U. farmers are required to implement IPM and give priority to non-chemical alternatives.
- Use of wild flower meadows to support the biological control.

New Zealand: the symbiosis of plants, animals and humans!

Albury Organic Vineyard

Let nature take 'her' course!

Biodynamic!

Working together...

...with Biodiversity

and Biological Control in order to
deliver

HARMONY

THANK YOU
