

We are the worldwide movement of biodynamic agriculture, which is a holistic, ecological and ethical approach. We promote a unique way of looking at organic agriculture, gardening, food and health. Today, biodynamic farming is one of the most sustainable and regenerative forms of agriculture in the world.

Did you know?

Our love for biodynamics goes back as far as 1924, when the first farmers developed biodynamic methods for healthy food, working around the trend of chemical pesticides.

Today, Demeter farmers are working more than 230,000 hectares of land in 65 countries. You can find Demeter-certified products in many countries, mostly in natural health food stores, farmers' markets and farm shops, as well as in supermarkets. Certified products carry the Demeter trademark, which represents our high quality standards.

Demeter producers and processors offer a broad range of healthy biodynamic quality products. From mild baby foods and great breakfast options (coffee, tea, cocoa, cereal) to a diverse variety of vegetables, fruits and meats. In addition, numerous processed foods are available, including pasta, soups and sauces, juices, ice cream and much more. We even offer cosmetic products made from biodynamic herbs and ingredients and textiles from biodynamic cotton production. Wines from biodynamic viticulture possess a true character, with a difference you can taste!

IT ALL STARTS WITH THE FARM ORGANISM.

We consider each farm unique and apply a holistic view.

It is a living farm organism, with its own individuality, individuality that manifests itself fully when a healthy state of interaction and cooperation has been achieved between the realms of earth, plant, animal and human-kind. Through holistic management practices that acknowledge the needs of all of nature's domains and of human beings, the biodynamic farmer seeks to heighten awareness and stimulate living and healing processes on the farm and to produce high-quality food.

More than organic

Biodynamics is not only about replacing agrochemicals by natural means, it is also about shaping the environment, the living world, and striving for a naturally developed balance. We not only think in terms of nutrient cycles, we also consider the farm an organism. Holistic means: "It is good when every part is well."

SOIL FERTILITY

FOOD QUALITY

BIODIVERSITY

ANIMAL WELFARE

ECOLOGICAL RESPONSIBILITY

PRINCIPLE 3

RESPECT FOR THE NATURE OF ANIMALS

Animal welfare is our highest priority. Farm animals not only provide milk, meat, eggs and honey, first and foremost they produce valuable manure – essential for healthy, nutrient-rich soil. Farmers create conditions on their farms that allow animals to behave in a way that suits their nature, free-range and pasture-fed. Animal feed ideally comes from their own farms, and is not bought externally. The animals are never mutilated – dehorning, debeaking, wing clipping, tail cutting and tail docking is prohibited.

PRINCIPLE 4

BIODIVERSITY IS PRICELESS

Biodynamic farmers promote and preserve biodiversity through good practices like polycultures, crop rotations, virgin forests, long-term grassland, water bodies, insect and bird shelter, and wildlife protection. At least 10% of the farmland is left wild or dedicated to biodiversity. Chemical pesticides and herbicides are prohibited.

PRINCIPLE 6

ECOLOGICAL RESPONSIBILITY

Demeter growers understand the mutual interdependencies in the ecosystem and collaborate with all of nature's stakeholders. Worldwide, they create biotopes for all living things on their farms – from the smallest insect to the largest animal and all of the life in between. Biodynamic farming restores fertility, sequesters carbon and regenerates insect, plant and animal life. Therefore playing an important role for the health of the climate!
